**LOOK--PAY ATTENTION\*\***--the next SBUG meeting will be held at the  
Cupertino library, Time: 7:15 P.M.

The next 3 meetings will be held on July 15, August 19 and September 16.

Certain discerning minds have discovered that if the proper calculations are made it  
may be determined that our meetings are held on the third Tuesday of each calendar  
month.

---

### MEMBERSHIP

If you wish to become a member of SBUG and start receiving our newsletter "DYNAMIC  
MEMORIES", then send \$20 (check or money order) to the following address;

South Bay TRS-80 Users Group  
P.O. Box 60116  
Sunnyvale, Ca.94088

or come to one of our meetings. If you also wish to communicate with our bulletin board  
system (SBUG-80) then include an additional \$25 (a one time fee) for an account on the  
system. You must be a member of SBUG to have an account on the system. Please include  
your address and phone number.

#### THE EDITOR'S BYTES AND BITES

This is in homage to a departed member, Don Rhodes. No, he has not died, he has moved to Los Angeles, arguably a more bitter fate. Don was our treasurer, a good one, and he was a great deal more. He took over the treasurer's job when the club's affairs were in disarray. For the first time in the club's history we had a legible, complete, monthly financial report.

Don was also the moving spirit (seconded by various) in setting up the new club bulletin board. He wrote articles for Dynamic Memories, he was a major contributor to the bulletin board, he was incessantly curious about the microcomputer field, constantly contributing bits and pieces of information that amplified the knowledge of all of us.

His programming skills and all around expertise made him a welcome contributor to the bulletin board, to the newsletter and in conversation.

We miss you, Don. There's no hope of saving L.A., but you'll certainly help to make it more bearable.

One thing more. What have YOU done for the club lately?

## SOUTH BAY USERS GROUP

### GLORIOUS NEWS

We will have a new treasurer next month, the honorable Henry Schultz. He is not listed with the club officers on page two this month because the formal investiture has not yet taken place. Once the ceremonial robe has been placed around his shoulders and he has accepted the red and blue pens signifying his high office he's hooked. I mean it becomes official.

### EXPAND YOUR PRINTER TO 64K FOR 8 CENTS A BYTE

by Ian Webb;

Not very long ago, memory at 8 cents per byte would have been considered amazing. For that price you can get memory plus a neat package to expand your Epson MX, RX, FX series printer to include a 64K built-in buffer.

Be warned that not all programs can effectively use a printer buffer, but even some that don't mate too well with a buffer can at least be sped up with a hardware buffer.

Wordstar isn't very fast at printing. Compared to SuperScript it barely pokes along as it checks each line of text before it prints it. Even with a buffer in use, over four or five pages, you only release the system with perhaps a half page left to print. However, you discover that for some reason, the printing itself is appreciably faster when a buffer is attached.

So, even with a slow word processor like Wordstar, you finish your printing perhaps one third faster. Other programs can be MUCH faster. DOS print screen happens almost instantly and if you copy a file to the PRN: you are done almost before you can look back from the just starting printer.

The biggest gain I have found for my own extensive use of Wordstar is when printing my final copy in Near Letter Quality mode using a Finger Print LetterWriter (Oresselhaus) on an FX-100, my computer is freed about half way through printing a full page document.

I saw an advertisement in Computer Shopper for a 64K printer buffer for \$55 and wrote for information. I received back a rather complete letter with information and the word that he was selling the unit for \$50 since the ad had been first placed. I sent a check for \$50 and received the unit by US Mail in about a week. I received a "Wizard" buffer manufactured by Wesper Microsystems. The circuit board looks well made and after removing the cover to your Epson printer, you plug it in directly in the connector already provided. By removing the blank over the existing parallel connector, the new board provides a new parallel connector above the old. You put your cable into the new connector and after that everything is automatic. There are four screws and washers to hold the board on posts that are in the printer.

You do have to make sure that the OIP switches power up the printer with the printer selected (normally you set them this way anyway) and unless you have a unit like the Finger Print you have to turn off the power to flush the printer buffer if you stop things in the middle of a print run. (The Finger Print unit I have allows the buffer to be dumped from the push-buttons.

JULY, 1986

If you have always wanted a hardware buffer, here is a chance to get one at less than half the price of the Tandy buffer. You don't need extra cables and you don't need to find room on your desk for it. You do lack a few features on some of the more expensive buffers like the ability to print multiple copies or to repeat pages, but for the price it is hard to beat.

Epson 64K print buffer, \$50 - State printer model (parallel only)

### REPLACE YOUR Z-80 WITH A SUPER CHIP

From NDRTHERN BYTES

David G. Huffman (1345 Williams Street, Des Moines, Iowa 50317) recently sent me information on a project that he has been working on. Apparently the Z-80 CPU used in the TRS-80 Models I/III/4 and in the LNW computer (which is what David uses) can be replaced with a Hitachi HD64180 CMOS Microprocessor. The HD64180 is NOT pin-compatible with the Z-80, but offers much more, thus hardware types may wish to tackle a conversion project.

Some of the features of the HD64180 include: Fast operating frequency (up to 10 Mhz). On-chip Memory Management Unit supports 512k byte memory and 64k I/O address space. Two-channel Direct Memory Access Controller with memory-memory, memory-I/O, and memory-memory mapped I/O transfer capability. WAIT Input and Wait State Generator for slow memory and I/O devices. Programmable dynamic RAM refresh addressing and timing. Two-channel, full duplex Asynchronous Serial Communication Interface with programmable Baud Rate Generator and MODEM control signals. Clocked serial I/O port with high speed operation (up to 300k bps at 6 Mhz). Two-channel 16 bit Programmable Reload Timer for timing and output waveform generation. Programmable Interrupt controller manages 12 interrupt sources (8 internal, 4 external) with 3 interrupt modes. "Dual Bus" interface compatible with all standard memory and peripheral LSI.

Enhanced standard 8-bit software architecture features include: Upward compatible with existing Z-80, 8085 and 8080 system and applications software. Optimized for higher performance of standard 8-bit operating systems (e.g. CP/M80). Enhanced instruction set including high speed multiply, I/O address relocation for board level product compatibility. SLEEP, IOSTOP, and SYSTEM STOP low power modes. Many existing Z-80/8080 instructions require fewer clock cycles to execute, thus, even with no change in CPU clock speed programs may run 10% to 20% faster.

David reports that there is only one problem in replacing a Z-80 instruction set with a HD64180, and that is that the HD64180 does not recognize the "undocumented" Z-80 instruction set (those machine language instructions that, although they do not appear in the official Z-80 instruction set, nevertheless are recognized by virtually every Z-80 ever made). David has found that a surprising amount of TRS-80 software makes use of the undocumented instructions. In his LNW conversion, he has figured out a way to divert those instructions to a section of code that translates the "undocumented" instructions to standard Z-80 code, executes it and returns to the original program.

It is my understanding that David is working on a Model 4 conversion using the HD64180. If you are a hardware hacker you may wish to obtain data and specifications sheets on this chip from your nearest Hitachi representative (or a Hitachi regional office

## SOUTH BAY USERS GROUP

in Burlington, Massachusetts, Dallas, Texas, Itasca, Illinois, San Jose, California or Woodland Hills, California). In Canada contact an office of Longman Sales Inc. (Mississauga, Ontario or Kirkland, Quebec).

Will this chip spawn the next generation of modifications for the Models I/III/4? It certainly seems to offer a lot of potential.

## CLONE OF MY DREAMS

by Editor

We do not all have the same desires when it comes to choosing spouses - fortunately for the perpetuity of the race; nor would we all choose the same components or types of components to make up a clone, fortunately for the manufacturers of said components.

The magazine references used here are heavily weighted towards COMPUTER SHOPPER. This is because COMPUTER SHOPPER is par excellence, the magazine for the less affluent hobbyist and hacker. BYTE is for the engineer, the top notch technician and the company purchasing agent.

The following dream clone (sans flowing golden hair (put that on the chest if you're feminine)) is chosen from picking through the ads in BYTE, INFO WORLD and COMPUTER SHOPPER. It is not an ideal clone, which might run to \$20,000 and it is completely idiosyncratic. If you don't like my clone, dream your own dreams.

I have included my reasons for choosing certain features. Anyone who agrees with all my choices is obviously a rare and discerning person.

The components are numbered and the comments on them follow the list of components and are keyed to the list with the same numbers.

COMPONENT	PRICE	SOLD BY	MAG.	PAGE
1. AT MOTHERBOARD	799	PREF.SOURCE	C.SHOP.	308
2. 200W POWER SUPPLY	269	PREF.SOURCE	C.SHOP.	308
3. 30 MB HARD DRIVE	349	LEAD.EDGE	C.SHOP.	299
4. QUIMAX MONITOR	159	TINMA	C.SHOP.	231
5. METAL CASE	89	YILON	C.SHOP.	22
6. 2 1.2 FLOPPIES	338	C.La P.	INFO.	57
7. 5153 KEYTRONICS	319	C.La P	INFO	57
8. FLOP.CONTROLLER	99	COMPAT.WHSE	C.SHOP	233
9. HO CONTROLLER	139	COMPAT.WHSE	C.SHOP	233
10. R.S.232 CARD	30	MAGITRONIC	C.SHOP	32
11. MONO/GR CARD	119	LOGICSOFT	BYTE	49
12. ASS.HARDWARE	100			
TOTAL	\$2809	(CHEAP)		

## DREAM CLONE EXPLAINED

1. This comes with 640k and bios installed, expandible to 1 meg. Nowadays 640k is not enough, but that can be taken care of by installing more RAM.

JULY, 1986

2. I attach a lot of importance to the power supply and wouldn't feel easy with less than 200W for an AT type.

3. 30 Mb should be enough and the price makes this a real buy. Leading Edge has a good reputation.

4. Be careful when you buy a monitor. All the ads say hi-res. It's something like saying a man is honest. How honest? How hi-res? This one is 13", comes with cable and 750 by 350 resolution. I had a hard time deciding not to get color. We will see color used increasingly in applications such as word processors, databases and spreadsheets. The use of color can be very effective as a teaching device and for delineation..

5. I don't think there is much difference in cases unless you look for a real cheapie.

6. Why two floppies? Why 2 1.2 meg. floppies? What do you do when the HD goes out? If you have two floppies you're still in the game. If they're 1.2 floppies you should be able to handle almost any job you were doing on the HD.

7. This is the AT keyboard and Keytronics makes the best. A little on the expensive side but if you've ever suffered from a poor keyboard you won't argue with this one.

8. With serial, parallel and clock.

9. Cable Included

10. Can't do without it if you have a modem.

11. 720 X 348 pixel graphics, parallel printer port, Lotus 1-2-3 compatible with TTL monochrome output.

12. For cables, screws and assorted small hardware. Something is always missing. (For details see Murphy's law)

Finally, although this dream was fun, I wouldn't think of doing this in real life. Things that should be compatible--aren't. Any important components should be bought from your friendly neighborhood computer dealer who will happily receive returns of faulty merchandise. Buying things by mail order can be advantageous. The use of credit cards gives the purchaser a 30 day guarantee where the exercise of the guarantee is at the purchaser's option. This is fine when you're buying a piece of software or minor hardware. Not so in this case. Returning a flawed motherboard three or four times could exhaust the patience of any computer hobbyist. (Notably patient people.)

#### ZUCKERBOARD by Editor.

All of you Model 1000 users should read the article on the Zuckerboard on page 77 of the July COMPUTER SHOPPER. It is more interesting and dependable than the usual review because the reviewer owns a Model 1000, works with a model 1000 and installed the board himself. Of course the last review of that type that I read was written by a fellow who had just bought an LNW.

#### MODEL 4 CORNER

by Editor

I frequently speak of AIDSPLUS-II because it is a really excellent database file manager. I used to work with PROFILE and wasn't unhappy about it because it was a well debugged program and never gave me any trouble. However, Profile was slow as molasses and AIDSPLUS-II is fast as a fly.

AIDSPLUS is written in machine language. There have been various revisions and I simply can't think of how it could be made better, except that it is not relational-- not quite. Recently I got a flyer from SOFTRENDS regarding updates, more properly added functions for AIDSPLUS. I purchased two of them for \$49, and the only one I have used is excellent, I could almost say extraordinary.

I will quote from the brochure: RE-VISE is a new extended function designed to work within your existing AIDSPLUS-II system. It enables you to directly access individual records within a data file -- even if it's the size of a whole disk! REVISE is great for updating large mailing lists, looking up account balances, or locating data that may be in any one of several files. You can retrieve a record from the disk, view it, change it, and put it back into the file. Records do not have to be in sorted order, and no index files are used (saves disk space).

This is really an unusual and time saving function. It approaches relational filing. Please follow me. Boot up AIDSPLUS-II. Go into the descriptor file. The descriptor file may have a number of data files. You may remove any given record from file 1, update it and return it to the file. If you had similar records on file 2 you could do the same, thus achieving the same result as is given by relational files. You might call it a manual relational file. Then again you might not.

I also got FILEAIO. This gives me the ability to handle disk-size files for sorting. My original copy of AIDSPLUS-II loads the data into memory and even though AIDS uses a very competent storage method it typically limits the user to 400 records depending on the number of fields. I haven't used FILEAIO yet, but it's there if I need it. SOFTRENDS claims the sort is at least twice the speed of a P.C. sort. I haven't caught them lying yet. AIDSPLUS-II also has an automation process called AUTOKEY. Once this has been set up a single keystroke would be sufficient to sort 800 records.

JULY 1986

Two other new functions, AUTOMATE & AUTOLINK were also advertised but I didn't buy them. I don't do that much complicated automated work.

RE-VISE is a great program. If you have to update individual records frequently, as most database users do, it's a real time saver.
